TITLE OF INVENTION: METHOD FOR INHIBITION OF PHOSPHOLAMBAN ACTIVITY FOR THE TREATMENT
TITLE OF INVENTION: OF CARDIAC DISEASE
CURRENT SEPERENCE: 6627-P49925
CURRENT APPLICATION NUMBER: US/10/705,791
CURRENT FILING DATE: 2003-11-10
PRIOR APPLICATION NUMBER: 60/106,718
PRIOR APPLICATION NUMBER: PCT/US99/25692
PRIOR APPLICATION NUMBER: PCT/US99/25692
PRIOR FILING DATE: 1999-11-02
NUMBER OF SEQ ID NOS: 19
SOFTWARE: Patentin version 3.2
LENGTH: 36
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    US-09-954-571-1

Sequence 1, Application US/09954571

Sequence 1, Application US/09954571

Publication No. US20020032167A1

GENERAL INFORMATION:

APPLICANT: Chier, Kenneth R

APPLICANT: Ross, John

APPLICANT: Ross, John

APPLICANT: Ross, John

TITLE OF INVENTION: HIGH EFFICIENCY CARDIAC GENE TRANSFER

TITLE OF INVENTION: HIGH EFFICIENCY CARDIAC GENE TRANSFER

CURRENT FILLING DATE: 2001-09-11

PRIOR FILING DATE: 2001-09-11

PRIOR FILING DATE: 2000-11-09

NUMBER OF SEQ ID NOS: 5

SOFTWARE: Patentin version 3.2

SEQ ID NO 1

LENGTH: 52

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C, Comment: Phospholamban is expressed in cardiac muscle, succession and comment: Phospholamban is the major phosphorylated protein in cardiac muscle sarcoplasm

C, Comment: Phospholamban is the major phosphorylated protein in cardiac muscle relaxation in C; Superfamily: phospholamban is the major phosphorylated protein in cardiac muscle relaxation in C; Superfamily: phospholamban

C, Reywords: acetylated amino end; ATPase inhibitor; muscle; pentamer; phosphoprotein; tri
F; 11-52/Domain: transmembrane #status predicted F; 11-Fill of site: acetylated amino end (Met) #status predicted
F; 16/Phinding site: phosphate (Ger) (covalent) (by calmodulin-dependent kinase) #status predicter
F; 17/Phinding site: phosphate (Thr) (covalent) (by calmodulin-dependent kinase)

C; Comment: Phospholamban is expressed in cardiac muscle, slow twitch skeletal muscle, and c; Comment: Phospholamban is the major phosphorylated protein in cardiac muscle sarcoplase; after phosphorylation, the Ca++ pump is activated and the rate of muscle relaxation is c; Genetics:

A,Note: che single intron is upstream of the coding region

Herzyk P., Hubbard R.E.; Using angelia model of the Uraing experimental information to produce a model of the language transmembrane domain of the ion channel phospholamban."; Biophys. J. 74:1203-1214(1998).

-!- FUNCTION: Phospholamban has been postulated to regulate the activity of the calcium pump of cardiac sarcoplasmic reticulum.

-!- SUBUNIT: Homopentamer.
                                                                                                                                                                                                              -i- SUBCELLULAR LOCATION: Membrane.
-i- TISSUE SPECIFICITY: Heart.
-i- PTM: Phosphorylated in response to beta-adrenergic stimulation.
-i- PTM: Phosphorylated to the phospholamban family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Rattus norvegicus (Rat), and Oryotolagus cuniculus (Rabbit).
Oryotolagus cuniculus (Rabbit).

Res. 71:1021-1030(1992).

-!- FUNCTION: Phospholamban has been postulated to regulate the activity of the calcium pump of cardiac sarcoplasmic reticulum.

-!- SUBGNIT: Homopentamer.

-!- TISSUE SPECIFICITY: Heart.

-!- TISSUE SPECIFICITY: Heart.

-!- TISSUE SPECIFICITY: Heart.

-!- TISSUE SPECIFICITY: Heart.

-!- SIMILARITY: Belongs to the phospholamban family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MEDLINE=93284726; PubMed=8508530; Shanahan C.M., Weissberg P.L., Metcalfe J.C.; Shanahan C.M., weissberg P.L., Metcalfe J.C.; Isolation of gene markers of differentiated and proliferating vascular smooth muscle cells."; Circ. Res. 73:193-204(1993).

J. 262:353-356(1989).

-! FUNCTION: Phospholamban has been postulated to regulate the activity of the calcium pump of cardiac sarcoplasmic reticulum.
-! SUBDNIT: Homopentamer.
-! SUBGELIULAR LOCATION: Membrane.
-! TISSUE SPECIFICITY: Heart.
-! TISSUE SPECIFICITY: Heart.
-! PIM: Phosphorylated in response to beta-adrenergic stimulation.
-! SIMILARITY: Belongs to the phospholamban family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          6

                                                                                                                                                                                                                                                                                                                                                                                                                                             -1- TISSUE SPECIFICITY: Heart.
-1- FIM: Phosphorylated in response to beta-adrenergic stimulation.
-1- SIMILARITY: Belongs to the phospholamban family.
                                                                                                                                                                                                                           f. Biol. Chem. 266:5375-5383(1991).
-!- FUNCTION: Phospholamban has been postulated to regulate the activity of the calcium pump of cardiac sarcoplasmic reticulum.
-!- SUBGINIT: Homopentamer.
-!- SUBGINITAR LOCATION: Membrane.

Parro V., Mellado R.P.;
Submitted (FBB-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCIION: This protein is located at the 30S-50S ribosomal subunit
interface and may play a role in the structure and function of the
aminoacyl-tRNA binding site (By similarity).
-!- SIMILARITY: Belongs to the L19P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SEQUENCE FROM N.A.

-!- CATALYTIC ACTYVIY: ATP + L-alanine + tRNA(Ala) = AMP +
diphosphate + L-alanyl-tRNA(Ala).
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to class-II aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                STRAIN=DSM 1728;

InterPro; IRRO0893B; ARM. InterPro; IRR002554; B56. Pfam; PF01603; B56; 1.
constant regulatory subunit (PR65 or subunit A), that associates with a variety of regulatory subunits. Proteins that associate with the variety of regulatory subunits broteins that associate with the variety of regulatory subunits B (the R2/B/R85/B55, R3/B''/PR12/R8130/PR59 and R5/B'/B56 families), the 48 kDa variable regulatory subunit, viral proteins, and cell signaling molecules.
-!- SUBCELLULAR LOCATION Cytoplasmic.
-!- TISSUE SPECIFICITY: Widely expressed with the highest expression in heart and skeletal muscle.
-!- PTM: Phosphorylated on serine residues.
-!- SIMILARITY: Belongs to the phosphatase 2A regulatory subunit B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE-88298841; PubMed=3042778;

Submitted (MAY-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: This protein is located at the 30S-50S ribosomal subunit interface and may play a rolle in the structure and function of the aminoacy1-tRNA binding site (By similarity).
-!- SIMILARITY: Belongs to the L19P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                       "Comparative complete genome sequence analysis of the amino acid replacements responsible for the thermostability of Corynebacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

-:- PATHWAY: Glycerol utilization; first (rate-limiting) step.
-:- SIMILARITY: Belongs to the fucokinase / gluconokinase / glycerokinase / xylulokinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        STRAIN-VCI / DSM 3638 / ATCC 43587 / JCM 8422;
Weiss R.B., Dunn D.M., Robb F.T., Brown J.R.;
"The complete sequence of the Pyrcoccus furiosus genome.";
Submitted (FBB-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Key enzyme in the regulation of glycerol uptake and

Magnesium-chelatase subunit chlD (Mg-protoporphyrin IX chelatase) (Mg-chelatase subunit D).
Archaea; Buryarchaeota; Thermococci; Thermococcales; Thermococcaceae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                -!- CATALYTIC ACTIVITY: ATP + glycerol = ADP + glycerol 3-phosphate.
-!- PATHWAX: Glycerol utilization; rate-limiting step.
-!- SIMILARITY: Belongs to the fucokinase / glycerokinase / xyulokinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Maguda T., Nakayama M., Ohta H., Takayama K.-I., "Cloning and sequencing of a chlD gene encoding a subunit of magnesium-chelatase from the cyanobacterium Synechococcus sp. 1- FUNCTION: Histone H4, along with histone H3, plays a central role in nucleosome formation.

1- SUBUNT: The nucleosome is an octamer containing two molecules each of H2A, H2B, H3 and H4. The octamer wraps approximately 146
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
